

IT MODERNIZATION & INFRASTRUCTURE MOBILITY

Migrating to public clouds has become a key component of IT modernization. Adopting Cloud enables organizations to focus resources on innovation, bring agility, and enhance overall customer response times and experience. With our VPC+ offering, you have the right product and a trusted partner in Wanclouds to guide you through every step of your Modernization journey.

Powering The Most Seamless IT Modernization Experience in the Industry

Wanclouds' approach towards IT modernization is a combination of its product called VPC+, its cloud expert team, and ongoing support. While our product helps accelerate and automate various aspects of the Modernization journey, we believe that at times cloud and software engineering skills are required to rework the infrastructure or application in order to be transformed, containerized, and ready for cloud. In addition, we also provide ongoing support to ensure post-migration success.

Accelerate & Automate Your Modernization Journey

The Wanclouds Multi-Cloud Migrations & Modernization as a Service offering gives you a fully-managed, automated, and accelerated way of taking your current environment, be it on-premises or cloud, and migrating it to your desired public cloud.

Our Migrations and Automation Suite, VPC+ automates the entire process and eliminates the long, complicated and error-prone manual processes. You get the ability to quickly and reliably discover, translate, migrate, backup, monitor and manage your workloads, all from a single pane of glass.

Key Features & Benefits

- ✓ Pay As You Migrate
- ✓ Powerful Visualization
- ✓ Super Fast Migration
- ✓ Cross-Cloud Portability
- ✓ Single Pane of Glass
- ✓ Seamless Automation
- ✓ Templatize Cloud Infrastructure

Value Propositions

- ✓ Reduced complexity and eliminate the need for different tools and scripts
- ✓ Reduced costs, no need to hire expensive consultants
- ✓ Reduced migration time from weeks to hours
- ✓ Improved performance and agility
- ✓ Infrastructure Portability
- ✓ Comprehensive migration coverage including VPCs, VMs, Databases, Content & more
- ✓ Ongoing support to ensure post-migration success

End-to-end Enterprise IT Modernization & Infrastructure Mobility Solution

On-prem to Cloud

Migrate your legacy environments to a cloud of your choice seamlessly in a fully automated way

Cloud to Cloud

Migrate your infrastructure or individual components across clouds in a flexible and seamless way.

Modernization to Cloud-Native Framework

Adopt Kubernetes as a containerization and orchestration framework to deploy applications in hybrid or public cloud environments.

We provide enterprises with flexible engagement options to modernize existing legacy applications, strangle monoliths, and migrate to microservices, containers, and the cloud. We leverage our VPC+ MaaS to automatically discover your Cloud Kubernetes Service resources and migrate them as required.

Migrate applications, including all persistent data, between Kubernetes clusters regardless of the underlying infrastructure. Choose the cluster that you want to migrate, and we provision these resources in a VPC with all of its data workloads running on it.

Modernization Capabilities:

- ✓ On-Prem to Cloud - Kubernetes and Redhat OpenShift
- ✓ Cloud to Cloud - Extend your kubernetes across cloud
- ✓ Application Migration Across Clusters

Business Continuity Solutions:

Our on-demand Disaster Recovery as a Service (VPC+ DRaaS) reduces the financial investment and technical complexities that often halt or delay businesses from setting up disaster recovery protections and ensuring compliance requirements in case of any unforeseen natural disasters or ever increasing security risks that threaten business continuity.

VPC+ DRaaS gives you the ability to backup multi-cloud infrastructure such as VPCs along with network functions including security functions, ACLs, load balancers and application mobility which can be restored across different regions of cloud provider or even on different cloud providers.

Deployment

Our solution VPC+ is offered as a SaaS offering through cloud marketplaces. If you have special requirements for a private instance of our solution, please contact our team for further details.

Wanclouds Inc. is a leading multi-cloud SaaS solution and managed service provider. We help enterprises with cloud deployments, migrations, disaster recovery and protecting their cloud infrastructure in time and cost-efficient ways

We look forward to assisting you with your modernization journey
